

Your Path to an Earlier Harvest Starts this Fall with Nature's Wonder® APEX-10™

Bring healthier, stronger sod to market up to 12 months sooner

Thanks to an improving housing industry as well as municipal needs, demand is on the rise in the sod industry. Turfgrass producers can gain a competitive edge in the marketplace by producing quality turf faster.

We offer growers the ultimate soil and plant health technology™ Nature's Wonder® APEX-10™. Derived from peat using a patented process, APEX-10™ is a one-of-a-kind powerful natural liquid Bio-Stimulant and Soil Amendment in one that has been proven through university testing and real world applications to deliver results that will transform your business.

With Nature's Wonder® APEX-10™, your customers will:

- Produce healthier, stronger turfgrass
- Experience faster rooting
- Improve stress tolerance
- Reduce transplant loss
- Improve fertilizer & irrigation efficiency
- Reduce the overall sod production cycle

Nature's Wonder
APEX-10

2 Gal
per acre
each growing cycle

Cool Season Turf: Apply 1 gallon per acre at planting, 0.5 gallon per acre in early spring when soil temperatures are acceptable, and 0.5 gallon again 30 days later.

Warm Season Turf: Apply 1 gallon per acre when new growth has emerged or sprigs have shown consistent growth, 0.5 gallon 30 days later, and 0.5 gallon 30 days after that.

Sod at Installation: Spray 3oz per 1,000 sq. ft. on soil, then 3oz on top of sod.

Rewarding Return on Investment

A condensed production cycle brings in revenues earlier, and enables the production of a 3rd cycle in the same amount of time 2 cycles would have been produced. Delivering a terrific ROI.
